

Engineering and Micro-Precision.

Tooling and equipment engineering

MLWS Precision provides a full spectrum of CAD/CAM services, 3D printing, rapid prototyping to component manufacturing, quick turnaround process tooling and equipment solutions.

A scarcity in the marketplace, we can consult, design and build engineering solutions, as we are uniquely qualified to understand the **medical and manufacturing devices industry** from the inside out, from concept to production.

Our services

- Computer-Aided Design and Drafting (CADD) from concept to production.

- Complex components CNC Machining, from concept to production.

- Rapid prototyping, 3D printing, quick process solutions.

- Process-to-Equipment technology selection.

- Semi-automation and assembly of pneumatic and electro-mechanic equipment.

Why choose us?

- Integrated and engineered solutions to increase your business effectiveness.
- Experienced Design for Manufacturing strategies.
- High performance team, quick prototyping skills.
- Hi-Tech CNC Mills (DMG), CNC Lathe technical capabilities.
- ISO 13485:2016 in process of pre-qualification.

Additional capabilities

- Full Process Development consulting, Process characterizations, Design of Experiments, Process/Test Method Validation.
- Material selection and outsourcing of anodizing, special finish/coating processes and heat treatments.
- Production line capacity and balancing.
